US-CL-CURRENT: 800/14; 435/325, 435/383, 435/384, 435/455, 435/459, 435/461,  
435/462, 435/463, 800/17

ABSTRACT:

Disclosed are methods for the isolation of primordial germ cells, culturing these cells to produce primordial germ cell-derived cell lines, methods for transforming both the primordial germ cells and the cultured cell lines, and using these transformed cells and cell lines to generate transgenic animals. The efficiency at which transgenic animals are generated by the present invention is greatly increased, thereby allowing the use of homologous recombination in producing transgenic non-rodent animal species.

Orntoft; Torben F.	DK 8230 Aabyhoj			DK

US-CL-CURRENT: 435/6; 435/91.1, 435/91.2, 536/23.1, 536/24.3, 536/24.31, 536/24.33

ABSTRACT:

Methods for analyzing tumor cells, particularly bladder tumor cells employ gene expression analysis of samples. Gene expression patterns are formed and compared to

reference patterns. Alternatively gene expression patterns are manipulated to exclude genes which are expressed in contaminating cell populations. Another alternative employs subtraction of the expression of genes which are expressed in contaminating cell types. These methods provide improved accuracy as well as alternative basis for analysis from diagnostic and prognostic tools currently available.

TITLE: Protein formulation comprising coagulation factor VIII or factor IX in an aqueous solution

DATE-ISSUED: July 6, 1999

## INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Osterberg; Thomas	Stockholm			SE
Fatouros; Angelica	Stockholm			SE

US-CL-CURRENT: 530/383; 530/380, 530/384, 530/414, 530/417, 530/427, 530/829, 530/830

## ABSTRACT:

A final drug product comprises a plasma protein selected from the group consisting of coagulation factor VIII and factor IX, in an aqueous solution. The concentration of oxygen in the solution is reduced and/or the solution contains an antioxidant. The solution further contains a carbohydrate in a concentration of at least 350 mg/ml. The protein activity after storage for at least 6 months at a temperature of from 0.degree. C. to 40.degree. C. is from 70% to 130% of its initial value. In a process for preparing the final drug product and a method for improving the long-term stability of coagulation factor VIII or factor IX in an aqueous solution, a carbohydrate is included in the solution in a concentration of at least 350 mg/ml and the solution is stored in its final container under an oxygen-reduced atmosphere or includes an antioxidant.

Yanagisawa; Masashi	Dallas	TX		

US-CL-CURRENT: 435/6; 435/24, 435/252.3, 435/29, 435/69.1

## ABSTRACT:

Endothelin-1 (ET-1), a 21-residue vasoactive peptide, is produced in vascular endothelial cells from the 38-residue inactive intermediate, big endothelin-1 via a specific cleavage at Trp21-Val22. The protease that catalyzes the conversion, endothelin converting enzyme (ECE), constitutes a potential regulatory site for the production of the active peptide. Disclosed herein is the identification of ECE-1, a novel membrane-bound neutral Zn.sup.2+ metalloprotease that is expressed abundantly in endothelial cells in vivo, and structurally related to neutral endopeptidase 24.11 and Kell blood group protein. When transfected into cultured cells that normally secrete only big ET-1, the ECE-1 cDNA conferred the ability to secrete mature ET-1. In transfected cells, ECE-1 processes endogenously synthesized big ET-1 as well as exogenously supplied big ET-1, which interacts with ECE-1 on the cell surface. The remarkable specificity of ECE-1 provides a target for selective pharmacological intervention to alter ET-1 production in certain clinical disorders.

## BASIC-ABSTRACT:

NOVELTY - A crystal (I) of protein-ligand complex (PL) comprising a PL of an N-terminal truncated factor VIII and a ligand, is new. The crystal diffracts X-rays to determine the atomic coordinates of PL to a resolution of more than 5.0 Angstrom

and the N-terminal truncated factor VIII, retains the C2 domain of, and lacks at least 2000 amino acids from the flexible N-terminus of, the full-length factor VIII.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for an N-terminal truncated factor (tF) VIII lacking the first 2000-2200 residues of the N-terminal amino acids of the corresponding full-length factor VIII.

USE - (I) is useful in drug screening assays. The method comprises selecting a potential ligand by performing structure-based drug design with a three-dimensional structure determined for the crystal, preferably in conjunction with computer modeling. The potential ligand is contacted with the ligand binding domain of factor VIII and the binding is detected. A potential ligand is selected as a potential drug on the basis of its binding to the ligand binding domain of factor VIII with a similar affinity to a standard ligand, such as glycerophosphorylserine, phosphate or sulfate. The N-terminal truncated tF VIII is useful for growing a crystal of protein-ligand complex by contacting it with a ligand, where the N-terminal truncated tF VIII forms PL with the ligand and the crystal of the complex is grown by sitting-drop vapor diffusion. (All claimed). (I) is useful for identifying candidate drugs that inhibit coagulation. The N-terminal truncated tF VIII is also useful for identifying and analyzing mutant variants of C2 domain of factor VIII that can be incorporated into full-length factor VIII. The variants are useful in treating hemophiliac patients to display reduced or altered immune responses to treatments with factor VIII.
